

Here is the original paragraph. Keep in mind that students don't need to follow this template exactly. Punctuation can be used in a variety of ways.

Albert Einstein, a towering figure in the realm of physics and a symbol of intellectual curiosity, reshaped our understanding of the universe through his groundbreaking theories. Born in 1879 in Ulm, Germany, Einstein's revolutionary insights challenged established notions of space, time, and gravity. His equation $E=mc^2$ encapsulated the profound relationship between energy and mass, fundamentally altering the scientific landscape. Beyond his transformative scientific contributions, Einstein was an advocate for peace, civil rights, and humanitarian causes. He used his fame to promote global cooperation and understanding. His legacy as an intellectual and humanitarian is still prominent today.
