## Lost in Space

The year is 2050, and you are an astronaut on a routine mission to space.

That's when (out of nowhere) your spacecraft enters a dense asteroid field.

Luckily, you and your crew members escape the asteroids with minimal damage to the spacecraft.

However, there is a problem.

You and your fellow crew members are lost.

The only thing damaged from the asteroids is the spacecraft's deep space network antenna.

You have no idea where you are or where you are going.

That's when you see... 🔒

Your mission is to finish the following story. Be specific about what you see. And provide details about what happens next.
